

## Use of Business and Entrepreneurship Terms in Fields

**Kamilova Durdona Kozimjonovna**

State Customs Committee of the Republic of Uzbekistan, Senior teacher of the Customs Institute

**Abstract:** This scientific article reveals the system of application of business and entrepreneurship terms in the fields. Terms have a special place in lexicography. It is known to all of us that as all spheres of our life are developing, business and entrepreneurship are also developing widely.

**Key points:** business, entrepreneurship, term, terminology, analytical system, application in the field.

Before the lexicographical analysis of the terms in the English and Uzbek languages, it is permissible to dwell on the subject of lexicography and the dictionary considered as its object of study. "Dictionary - a book in which the words of a language are compiled in a certain order, explained or translated into another language. Word; a set of all words in a language; vocabulary." Following the above opinion, in our opinion, a dictionary is a systematic view of words collected and arranged for a specific purpose. "The field of theoretical and practical principles of vocabulary building is called lexicography." It can be seen that lexicography is a field dealing with dictionaries.

A dictionary is a treasure that shows the vocabulary of a language, a factor that expands the scope of a person's knowledge. Speeches of people with a rich vocabulary are clear and meaningful. For this reason, vocabulary has a special value. Vocabulary is constantly developing, because old words are replaced by new ones, and different terms related to different fields from other languages enter the lexical layer of the language. Therefore, putting different words or terms into one dictionary is a difficult task. One of the founders of theoretical lexicography, the famous linguist and academician L.V. Scherba also emphasized that "lexicography is the most difficult field in linguistics". Despite the difficulties in creating a dictionary and the fact that it has a long history, the development of this field dates back two or three centuries. It is reasonable to say that the main reason for this is the gradual development of science, especially linguistics. The first dictionaries contained a small number of words and were in handwritten form. Today, dictionaries contain thousands or even millions of words. Due to several developments in technology, dictionaries are available to the public in electronic or printed book form. In addition, the "Multilingual dictionary" is developing widely today. It is worth noting that modern dictionaries include explanations and comments in some places with equivalents in other languages.

In recent years, as we have witnessed, dictionaries have not only studied from a practical point of view but also their theoretical directions, subjects and cross-analysis of lexicography in different languages are becoming popular in linguistics. For this reason, creating a dictionary and studying its practical and theoretical aspects on a large scale has become one of the most important fields of linguistics. "The name of the great people who contributed to the development of lexicology will be honoured forever. For clear proof of this, it is enough to mention the name of our grandfather Mahmud Koshghari. He was created almost 1000 years ago, dedicated to the analysis of Turkic languages "Devonu lug' "Atit Turk" work is the unique wealth of all Turkic peoples. Mahmud Kashgari's name was forever imprinted on the pages of history. After the creation of the first samples, the dictionary was gradually formed. "When it comes to Eastern lexicography, the role of our compatriots Alisher Navoi, Mahmud Zamakhshari, Muhammad Yaqub Chingiy, Muhammad Reza Hoksor, who made a great contribution to its development, is also incomparable. Russian

linguists A.A.Navikov, P.N.Denisov, and B.V.Morkovkin contributed to the development of theoretical lexicography with their scientific and practical work. The practical lexicography of Western languages also rose to a new level in the last century. In this place, Oxford, Webster of English, La Russe of French, it is enough to mention the prolific and high-quality dictionaries of the German language Duden, Langenscheidt, Russian publishing houses, in which the creation and publication of theoretically based and practically oriented dictionaries is set consistently. So, in our opinion, in the era of publishing dictionaries, which are not directed to a specific goal, the quantity and quality of the words received and given, are not scientifically based and are limited only by the "taste" and talent of the compiler, has passed. It should be noted separately that in the lexicography of developed countries, especially in America, England, France, Spain, Italy, Russia and Germany, a unique systematic system of dictionaries has been created.

In addition to the mentioned Russian linguists, several linguists from other countries also analyzed business and entrepreneurship terms lexicographically and created unprecedented dictionaries. For example, D. E. Lewis's "Instant Business and Entrepreneurship Dictionary" includes the field terms under study, the dictionary consists of 3200 words, phrases and abbreviations. In addition, D. E. Lewis reveals the established and new trends of the existing terminological education in English as an example of the review of business and entrepreneurship terms.

As we have seen, due to the widespread popularity of creating a dictionary, several dictionaries of terms and terminology have been created in linguistics. Especially in English, which is interpreted as a world language, the terms of business and entrepreneurship have been studied a lot and several dictionaries of different forms have been compiled. We can cite many examples of such dictionaries in the English language, not only for the researched fields but also for terms related to other fields. However, it is appropriate for us to dwell on the dictionaries of business and entrepreneurship-specific terms in the Uzbek language, which are important for our cross-research work.

At this point, it is worth mentioning that in the field of lexicography, many dictionaries in the Uzbek language, like the English language, have not yet been compiled and theoretically researched. As a reason for this, we can say that, first of all, Uzbekistan is an almost newly independent country, and England has colonized other countries for several centuries. Nevertheless, after independence, several scientific researches were conducted, as a result of which the dictionaries mentioned above were compiled. The second reason is that English is the official and international language of many countries, so we can say that most foreign linguists have worked extensively in this language. In addition, today, business in Uzbekistan is developing sharply compared to the previous period, and as a result, the demand for learning the terms specific to this field is increasing. In general, although not related to business and entrepreneurship, several monolingual and bilingual dictionaries have been compiled in Uzbek for terms related to fields that are widely popular in other countries. It is no exaggeration to say that this, in turn, is a sign of the development and striving in our linguistics, especially in the field of terminology.

We all know that several dictionaries have been compiled for terms related to English language resources, in particular, the fields under study. The main reason for this, as we mentioned above, is the widespread use of the English language throughout the world. In addition, the central location of many business negotiations is located in America. For this reason, the terminologies in English linguistics are not limited to the analysis of local studies, but also widely analyzed by foreign linguists. Uzbek linguistics began to develop gradually after our country gained independence. Until now, a number of important studies on terminology have been carried out in linguistics. In all the conducted studies, the comparison of the current Uzbek terminology with the terms of the future periods and the comparative analysis with the terms of the Turkic languages were carried out. Of course, this is a collection of work of great importance for a short period of time. In the last two or three years, the demand for learning foreign languages, mainly English, has become wider than before. For this reason, cross-research of English and Uzbek terms, especially terms related to business and entrepreneurship, is becoming popular in the activities of linguists.
